

TRINH QUOC TRUNG

AI Engineer

Email: trinhquoc trung10504@gmail.com | Mobile: 0865498733 | LinkedIn: [trungtrinh10504](#) | Github: [trungtrinhquoc](#)

EDUCATION

FPT University

September 2022 - September 2026

Bachelor of Information Technology | Specialization: Software Engineering

- GPA: 8.2/10
- Awarded 30% Academic Scholarship

WORK EXPERIENCE

Dräxlmaier Automotive Vietnam

AI Engineer

June 2026 - present

- Develop internal automation tools and scripts in Python to streamline daily manufacturing and engineering workflows.
- Build and deploy computer vision and image processing solutions to detect visual defects and anomalies on industrial products.
- Implement robust error-handling, data processing pipelines, and logical checks to maintain high production accuracy.

Open Web Technology Vietnam

AI Engineer Intern

August 2025 - March 2026

- Built production AI storytelling pipeline for mobile app, orchestrating GPT-4o (text), Vertex AI Imagen (images), and Cloud TTS (audio) to generate personalized children's stories.
- Integrated a multimodal AI pipeline (text → image → audio) while maintaining consistent character design across 6–14 scene story sequences.
- Token Optimization: Reduced consumption 44% (850→480 tokens) via compact prompt templates and structured output design
- Reduced generation latency 27% (49s→36s) by generating 5 scenes concurrently in Python with async workers progressive result streaming
- Improved user experience by reducing Time-to-Interaction 60% (20s→8s) by delivering text first while multimedia generated in the background

PERSONAL PROJECTS

Mini RAG System

AI Engineer

- **Technologies:** Python, FastAPI, OpenAI API, FAISS, Hugging Face
- Built a complete RAG pipeline using FastAPI as the backend, OpenAI embeddings to vectorise document chunks, FAISS for fast nearest-neighbour retrieval, and GPT-4o to synthesise final answers from retrieved context.
- PDF ingestion → text extraction → chunk splitting, Embedding generation via OpenAI text, Vector storage and similarity search with FAISS, Top-k = 5 chunks passed as context into GPT-4o prompt.

FUOJT – OJT Management Ecosystem

AI Engineer

- **Technologies:** C# .NET 9, PostgreSQL, Gemini API, JavaScript/HTML/CSS, TypeScript
- Combined basic format checks with Gemini API to automatically evaluate candidate suitability based on skills and job requirements
- Built a Multimodal LLM pipeline that parses raw text and PDF/Word to extract structured fields and autofill job posting forms.
- Designed and optimized domain-specific prompts to guide LLMs in generating accurate candidate evaluations and strict JSON responses.

SKILLS

Programming Languages: comfortable with Python(FastAPI), OpenCV, YOLO, Numpy; Solid in Java (familiar with Spring MVC); basic in TypeScript/Javascript, HTML, CSS.

Database: Firebase, PostgreSQL(Supabase), MySQL, SQL Server

Tools: VSCode, Cursor, IntelliJ IDEA, Git, Github

CERTIFICATIONS

- Databases and SQL for Data Science with Python
